Objective

Result driven student looking for a future in developing cutting-edge technology with a strong passion for helping solve everyday problems and making technology more accessible.

Personal Profile

I am currently a 2nd Year student at Northumbria University looking to progress in software development or hardware and computers. ASD allows me to be hyper focussed on a goal and strive for the best outcome.

I really enjoy trying new technologies and pushing their limits. I am friendly, open, and non-judgemental and always try to solve issues diplomatically. I would like to consider myself very approachable. I am very methodical towards problems and have strong critical thinking skills.

Skills

Nodejs
Java
Php
Docker
Git / Github
Unreal Blueprint
C# .net
LAMP / MERN Stacks
Linux
Computer hardware
Workplace & Emergency First Aid
Social Media Management

Experience

Assistant Scout Leader • The Scouting Association • 2014 – Current

I have been through the scout system and now leading my own troop as a Leader. This has been invaluable to my skills including Leadership, First-Aid and working in a team.

Assistant Vehicle Examiner • DVSA • 2016 – 2016

While working with the team, I introduced more efficient procedures using computers instead of their currently implemented paper-based methods revamping their workflow.

Training Employee • COBALT-ICT • 2015 – 2015

I was given an opportunity where I was able to work on hardware and software for the company's clients, this also pushed me towards working for a CompTIA A+ Certification.
